**Tremco Commercial Sealants & Waterproofing Makes Key Organizational Changes to its Technical Service Department for Enhanced Customer Service**

BEACHWOOD, Ohio (April 15, 2010) — The Building Science Group and the Extruded Rubber Products Services Group were recently formed within Tremco Commercial Sealants & Waterproofing's Integrated Technical Solutions Group to better leverage technical strengths and expertise to better serve their customers, both internally and externally.

In order to better leverage their specialized capabilities and expertise, Eric Tango has been named Building Science Modeling Manager of the Building Science Group, and Derek Shoup was named Group Leader of the Engineered Rubber Products (ERP) Services Group.

As the Building Science Modeling Manager, Tango will lead the Imaging Team and will take Tremco's technical service department to a whole new level in the industry using 3-Dimensional Building Modeling and product sequencing detailing. Tango and his team will also work on standardizing its CAD software using state-of-the-art software for all detail drawings.

As a result of these organizational changes, Shoup and his team will now be fully dedicated to ERP support, including mold and die design, fielding phone calls, manufacturing and sales support, product labeling and shop drawing reviews. As Group Leader, Shoup will focus on ways to improve existing processes to enhance customer responsiveness.

Tremco Commercial Sealants & Waterproofing is North America's leading supplier of integrated building envelope solutions for the commercial construction industry. Product lines include high-performance

**Tremco Incorporated**
