FOR IMMEDIATE RELEASE

Tremco Commercial Sealants & Waterproofing Earns First Place for Toronto Construction Association's Innovation Award (TIPTA)

CLEVELAND, Ohio (January 26, 2008) ---- Tremco Commercial Sealants & Waterproofing received the first-place trophy for the Temple W. Harris Innovative Product & Technology Award (TIPTA), which is given annually to select Construct Canada exhibitors who've demonstrated the development and/or use of innovative construction technologies.

Tremco earned the award for its Proglaze® ETA Engineered Transition Assembly. The patent-pending Proglaze® ETA is designed to provide glaziers with a turnkey solution from a single source, ensuring documented compatibility, performance and eliminating the potential for delays waiting for completion of tie-ins or increased cost from multiple trips to complete tie-ins. Also, Proglaze ETA is designed to reduce the potential of workmanship errors resulting from detailing and involvement by a variety of trades. Its unique composition allows it to span and seal across irregular window geometries while absorbing dynamic movement and wind-loading stresses without it pulling apart.

Proglaze ETA is available in three systems: System 1 – Standard 6" Design, System 2 – Off-Set Dart Design, and System 3 – Pressure Bar System. Components in the assemblies include an extruded aluminum adaptor with a pre-engineered race for receiving the silicone lock-in dart; Tremco 440™ Butyl Tape to

temporarily hold the metal adaptor in position before mechanical fasteners are installed and serve as a secondary air and water seal; pre-molded, translucent silicone rubber corners and sheets in varying widths with a lock-in rubber dart; and high movement, low modulus Spectrem[®] 1 Silicone Sealant for a compatible adhesive and wet seal.

Proglaze ETA was also developed and tested to ensure long-term air and moisture protection when used in conjunction with Tremco's ExoAir[™] 110 and 110LT (Low Temperature) Self-Adhered Air & Vapor Barrier Membranes and ExoAir[™] TWF Self-Adhered Thru-Wall Flashing Membrane at transitions into door and window openings or curtain wall systems, offering the industry's only performance warranty when used together.

TIPTA was created by the Toronto Construction Association (TCA), an organization that provides a broad range of services and programs to the industrial/commercial/institutional sector of the construction industry. Tremco was acknowledged for their submission at TCA's booth during Construct Canada 2008 trade show in December at the TCA Christmas Luncheon following the Construct Canada show.

"A lot of hard work and dedication by our Glazing Solutions Group went into the development of Proglaze ETA, and we feel truly honored that the Toronto Construction Association chose to recognize it with this award," says Chuck Houk, Vice President/General Manager for Tremco Commercial Sealants & Waterproofing.

Tremco Commercial Sealants & Waterproofing is a world-leading supplier of sealants and waterproofing for the commercial construction industry. Product lines include high-performance silicone and urethane joint sealants; waterproofing membranes; drainage protection; air barrier systems; deck coatings; expansion joints; the industry's only comprehensive glazing systems including silicone sealants, tapes, gaskets, and setting blocks; and a full line of passive fire protection products and systems. With experienced sales representatives in every major market throughout North America, Tremco is positioned to provide assistance for specification development, application-specific product development, problem-solving and assistance on

site. For more information about Proglaze ETA or other Tremco Commercial Sealants & Waterproofing products, go to www.tremcosealants.com or call Tremco Customer Service at 800-321-7906.
