Note:
1. The applicator would slip a 1/2" diameter S.S. Washer and 3/4" thick Neoprene Washer over the threaded Nelson Stud welded to steel beam.
2. The applicator would then punch a 1/2" diameter or less hole in the Paraseal GM/LG membrane and slip the Paraseal GM/LG over the pre-installed Nelson Stud.
3. The applicator would install a 3/4" thick Neoprene Washer and then 3/4" inside diameter S.S. Washer over the Nelson Stud.
4. The applicator would install and tighten the 3/4" diameter threaded coupler and then apply Dymonic 100 sealant.

Note: Paraseal products require a minimum 24 psf compaction/confinein in order to function as designed.
