Paraseal LG with bentonite side facing installer

Cut the bolt flush with the nut. Install a 12” square target sheet of TREMDrain 1000 centered over the nut and using a rubber mallet lightly pound the TREMDrain 1000 target sheet over the nut. Staple in place as needed. Next install the main TREMDrain 1000 over the entire lagging wall followed by the Paraseal LG

TREMDrain 1000 as specified

12” Square target sheet of TREMDrain 1000

Wood Lagging (Lagging ties omitted here)

NOTE: Paraseal products require a min of 24 PSF of compaction/confinement in order to function as designed.
