

VULKEM™ SPORT COATING SYSTEM

System Overview

The Vulkem™ Sport Coating System is a high-performance, two-part water-based acrylic surfacing solution designed for asphalt and concrete athletic courts, as well as running tracks. The system incorporates an acrylic resurfacer to enhance substrate texture and uniformity, followed by acrylic color coats that deliver superior playability, aesthetic appeal, and UV resistance.

Vulkem™ Sport Acrylic Resurfacer: A 100% acrylic latex emulsion formulated for onsite mixing with sand and water. This filler coat minimizes surface porosity and optimizes texture on asphalt and concrete pavements.

Vulkem™ Sport Color Coat: A 100% acrylic, water-based color coating engineered for athletic courts and available in either Competition Blue or Competition Green colors. It serves as both a color filler/base coat and a durable finish coat, ensuring long-lasting performance over properly prepared substrates.

Applications include:

- + Tennis courts
- + Basketball courts
- + Pickleball courts
- + Multi-sport play areas
- + Running tracks
- + General recreational surfaces

Features & Benefits

- ✓ **Improved Playability and Aesthetics:** Enhances substrate surface uniformity and texture
- ✓ **Bold, Lasting Color:** Available in Competition Green and Competition Blue, and works with standard line striping paints
- ✓ **Environmentally Responsible:** Low VOC (<100 g/L) formulation is more environmentally friendly
- ✓ **Customizable Mix:** Adjustable porosity levels and textures
- ✓ **Versatile Use:** Suitable for both new construction and the refurbishment of courts for a wide variety of sports

VULKEM™ SPORT COATING SYSTEM

Versatile Sport Use

The Vulkem® Sport Coating System is purpose-built for surfacing and coating both new and pre-existing athletic courts, whether indoor or outdoor, and constructed from either asphalt or concrete. Ideal applications include tennis, basketball and pickleball courts, multi-sport areas, running tracks and general recreational surfaces.

Durable, Playable Surfaces

This system delivers a uniform, durable acrylic finish that enhances playability, visual appeal, and UV stability. It is suitable for new construction projects and the refurbishment of existing court surfaces, effectively reducing substrate porosity, improving surface texture, and providing vibrant, long-lasting color.
